Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product. The amounts shown here are illustrations based on an example investment amount and different possible investment periods. They are based on the following regulatory assumptions: (i) in the first year, you would get back the amount that you invested (0% annual return) and, for the other holding periods, the product performs as shown in the moderate scenario and (ii) 10,000 is invested.

This rates the potential losses from future performance at a medium level, and poor market conditions could impact the capacity of TMF Fund Management S. A. to pay you.

Not all risks affecting the Sub-Fund are adequately captured by the summary risk indicator.

This rating does not take into account other risk factors which should be considered before investing, including foreign currency risk, liquidity risk, equity risk, fixed income risks, market risk, new sub-fund, changes in applicable law, capital structure inversion risk, call extension risk, concentration risk, derivatives risk, high yield bonds risk, emerging markets risk and China financial market risk.

If TMF Fund Management S.A. is not able to pay you what is owed, you could lose your entire investment.

This product does not include any protection from future market performance so you could lose some or all of your investment.

Beside the risks included in the risk indicator, other risks may affect the Fund performance. Please refer to the prospectus, available free of charge at the registered office of the Fund.
